## **American Standard Features Award-Winning Home Comfort Products at 2015 International Builders' Show**

*Products designed to make homeowners' lives more comfortable, from heating and cooling, to geothermal and air filtration systems, to home control*

**LAS VEGAS (Jan. 20, 2015)** — Bringing its tradition of providing durable and practical home comfort products to the International Builders' Show (IBS) for the first time, American Standard Heating and Air Conditioning, a leader in residential solutions and services and an Ingersoll Rand (NYSE:IR) brand, showcases its newest innovations designed to make homeowners' lives easier.

**Products and technologies on display in American Standard Booth S2043 include:**

- The AccuComfort™ variable speed air conditioner, which offers the ultimate in energy efficiency and quiet operation
- The durable Silver 14 air conditioner that delivers reliable cooling and practical efficiency
- The American Standard AccuClean™ whole-home air filtration system, which removes up to 99.98 percent of particles and allergens in a home
- The Platinum TAM8 air handler, featuring a variable-speed motor and integrated humidity control through Comfort-R™ technology and including advanced communication features for a perfectly optimized matched system
- Compact and efficient ductless systems for homes without central heating and cooling systems
- American Standard's most advanced home energy command centers, including the AccuLink™ Platinum 950 Control
- Innovative geothermal systems that tap into the sustainable energy of the earth to return up to \$4 of heat for every \$1 of electricity used
- The American Standard 92 gas furnace, which provides consistent home comfort throughout the coldest winter months

"Families can always depend on American Standard to deliver quality heating and cooling products that provide the ultimate in home comfort. The products we're bringing to IBS uphold our promise, whether it's long-lasting reliability for the coldest and hottest times of the year, efficient systems to save energy, or technologies that put them in control of their home at all times," said Mark Hall, builder and retail leader for American Standard.

-more-

**American Standard AccuComfort: Constant Comfort All Year Long**

American Standard AccuComfort variable speed heat pump and air conditioning systems provide the ultimate in climate control and energy savings. This state-of-the-art technology delivers precise and efficient comfort by running heat pumps and air conditioners at the exact speed needed to maintain a home's ideal temperature, within 1/2 degree of the selected setting — similar to cruise control in a car.

The American Standard Platinum 20 heat pump with AccuComfort technology boasts an energy efficiency rating of up to 20 SEER, allowing homeowners to save an average of 38 percent on their monthly energy bill, saving up to \$564 per year on energy costs.<sup>1</sup>

**American Standard Silver 14 Air Conditioner: Durable and Efficient**

The American Standard Silver 14 air conditioning unit is an unbeatable combination of value and reliability. The trusted and durable design provides powerful, consistent cooling in any home, all while providing excellent efficiency.

**Breathe Easier With the AccuClean Indoor Air Filtration System**

American Standard AccuClean provides whole-house filtration for indoor air, which Environmental Protection Agency (EPA) studies indicate may be 25 times, and occasionally more than 100 times, more polluted than outdoor levels. It utilizes patented, breakthrough air-cleaning technology to eliminate allergens and particles, such as dust, pollen, bacteria, pet dander, mold spores and smoke. This advanced design is capable of removing up to 99.98 percent of particles and allergens down to .1 microns — equivalent to 1/1,000th the diameter of a human hair.

**Feel Cooler and More Comfortable With the Platinum TAM8 Air Handler**

It's easy to create a comfortable home environment with the American Standard Platinum TAM8 air handler, which automatically communicates and coordinates your other system components through the AccuLink Communicating System. The sleek design of the air handler's cabinet allows less moisture and fewer dust particles to be drawn in from garages, attics and crawl spaces, which helps prevent energy loss and virtually eliminates condensation.

**American Standard Ductless Systems: Flexible Home Comfort and Efficiency**

American Standard ductless systems for heating and cooling bring efficient, convenient and economical comfort to homes built without ducted heating systems or where the main system lacks capacity to expand, as well as to room additions where installing ductwork may be impractical or too expensive. Ductless systems allow homeowners to be efficient with their energy use, because they operate separately from a central system, and are individually controlled to provide heating or cooling only when needed.

**American Standard Home Energy Management At Your Fingertips**

The American Standard AccuLink Controls are easy-to-use advanced home management tools for remotely controlling the comfort of your home.

The AccuLink Controls are compatible with Nexia™ Home Intelligence, a leading home automation system and brand of Ingersoll Rand, enabling homeowners to remotely control their home's heating, cooling and energy usage from any Web-enabled computer or smartphone, for the ultimate in convenience, reliability and control. Nexia Home Intelligence requires a monthly subscription.

**Sustainable, Green Energy From the Earth**

American Standard is proud to offer its innovative line of Geothermal Systems, which harnesses the renewable heat from deep inside the earth, ensuring a virtually limitless supply of energy. These extremely energy-efficient systems can return up to \$4 of heat for every \$1 of electricity used. Four different configurations allow American Standard Geothermal Technology to adapt to any region, in any home.

**Stay Warm, Save Money With American Standard's 92 Gas Furnace**

With up to 92.1 percent AFUE efficiency rating, the American Standard 92 Gas Furnace offers quality comfort and efficiency. The efficient design saves on energy usage while reducing greenhouse gas emissions. The insulated cabinet is durable and quiet, holding more heat to better warm a home.

For more information about American Standard products, visit the American Standard booth at IBS or stay tuned for updates on [Americanstandardair.com](http://Americanstandardair.com).

*<sup>1, 2, 3</sup> Based on Energy Star's online Savings Calculator, a 3 ton Platinum 20 Heat Pump and programmable thermostat can save a homeowner in St. Louis Missouri up to \$564 per year on their heating and cooling costs when compared to industry standard 13 SEER, 7.7 HSPF 3 ton heat and thermostat. That means, American Standard AccuComfort™, with an energy efficiency rating of up to 20 SEER, can save these homeowners an average of 38 percent on their energy bill.*

**About Ingersoll Rand**

Ingersoll Rand (NYSE:IR) advances the quality of life by creating comfortable, sustainable and efficient environments.
